

Signs of Exhaustion

Be attentive and listen to your dog!

If he is struggling, or his behaviour in the water changes it is time for a rest.

Look for:

-  Rapid breathing & heavy panting
-  Salivation
-  Tongue end flattens like a shovel
-  Raising body out of water & rolling the hips
-  Muscle tremors & staggering

Note: Workups must be gradual to prevent the body from producing too much lactic acid. Serious injuries can result from over exercising a dog.
